

AMAZON FULFILLMENT CENTER

EASTVALE, CALIFORNIA

Architect: HPA Architecture

Pottorff Rep: Air Product Sales

Developer: Goodman Group

This new, one million square foot Amazon fulfillment center is located in Eastvale, California and specializes in the shipment of electronics, books, toys and smaller items to customers. The Eastvale center is Amazon's first large-scale robotics facility and is equipped with hundreds of robots that work alongside associates.

The innovative technology allows the robots to travel to various locations in the facility to pick up mobile shelves of products and deliver to employees who pick items off the shelves and pack them to be shipped to customers. Pottorff supplied control dampers and operable louvers for this facility.
